

Sunflower Air Quality Sensor

The sunflower air quality sensor accurately senses indoor harmful substances concentrations (PM2.5, CO2, formaldehyde, temperature and humidity), and communicates with the SMARTHIVE through ENOCEAN wireless technology. Users can check the air quality at home in real time through the mobile APP, and fully enjoy the safety, Health and service experience based on icloud applications

Features

- » -Using high-precision laser PM2.5 sensor and high-precision infrared CO2 sensor, stable and reliable
- » -Detection of five types of air data, using multiple fields
- » -Compact size prevents desktop or wall mounting
- » -Alarm information LED prompt
- » -ENOCEAN wireless communication, APP remote access
